

SmartDBMS

SmartDBM – Database Manager is the state-of-the-art Database Management Solution from SSTPL that helps the software developers in easily providing the open-ended, highly configurable and comprehensive Database Management for their applications. SmartDBM is a 100% web based product.

With SmartDBM, the requirements of the customer can be met directly in all terms. This module will make any of the applications stronger in terms of complete offerings.

Database Backup

You can define the periodicity of Database Back and the tables to be back up for this job. System will run the back-up scheduler automatically on the time and ensure back up is done. Further it can also trigger the Backup device to take input this and complete the back up process.

Database Archival

At SSTPL we had expertise in deploying Approval Workflow functionalities for major applications and this product is extensively used in all our mega applications. Our expertise will certainly help you in building your applications to meet international standards.

SmartFlow is available along with Source Code (complete source code and no hidden stuff) under special agreement for usage for your products only so that you can always fine-tune the capabilities if required.

Development Environment

Database Support	MS SQL / Oracle
------------------	-----------------
