

*Now enabling security control on your software is easy & Configurable*

**SmartSec** is the state-of-the-art product from SSTPL that helps the software developers in easily providing the open-ended, highly configurable and comprehensive security solutions (Access Control List for their applications) for their applications. SmartSec is 100% web based product that controls multi-layer security on your software application.

Most of the solutions are developed with Access Control List for their solutions based on User Roles like Administrator, Manager, and Normal User etc. But most of the corporate customers are looking to defining the Access Control List as per their business logic as some of the users cannot be classified into the above roles. For success of any of your applications, you are in need of a full-fledged, highly configurable security control solution and SmartSec is the only solution available across the geography to meet this requirement exactly.

### **Security Layers of SmartSec**

**MLAC** – Menu Level Access Control – with this functionality, corporate can define what functions (menu) the logged in user can see on his successful logon.

**OLAC** – Operation Level Access Control – with this functionality, corporate can define what type of operations (basically with this every button / hyperlink on the page can be controlled) the logged-in user can perform on his allowed function (menu)

**FLAC** – Field Level Access Control – with this functionality, corporate can define in the permissible menu, what fields the logged-in user can 1. View and provide input / modify, 2. Cannot View 3. View and cannot provide input/modify.

System can be easily integrated with any of your applications. The user master of your application can be used here also for taking further. With SmartSec you can assign access control list based on a group or individual user.

You can also assign access control list for a group / individual based on location (even if your base do not have a concept called location). The controls of SmartSec take care of the Access Permissions as defined.

SmartSec can be integrated with your system easily and involves minimal code change (just pasting of a security function) at all your programs and total integration can be done in maximum of a week time.

SmartSec is available along with Source Code (complete source code and no hidden stuff) under special agreement for usage for your products only so that you can always fine-tune the capabilities if required.
